

Question 6

(Suggested maximum time: 10 minutes)

A bag contains red disks, blue disks and white disks. In an experiment, each student in a class of 24 takes out a disk, records the colour and replaces it. This is repeated ten times. The results from the class are recorded in the table below.

Colour	Red	Blue	White	Total
Frequency	123	78	39	
Relative frequency Frequency				
Total % of total (Relative frequency × 100)				

- **(b)** Complete the table above.
- (c) Use the results from the table above to estimate the probability of getting each colour when a disk is taken from the bag.

Colour	Red	Blue	White
Probability			

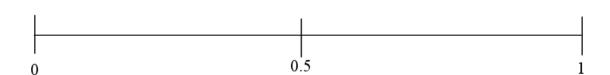

(d) Anne says that she thinks there are ten discs in the bag. Is this a reasonable suggestion? Explain your answer.

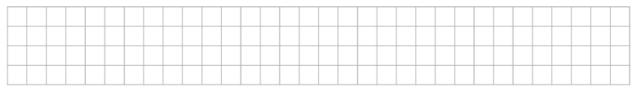

(e) Based on the information in the table, how many disks of each colour do you think are in the bag?

(a) For each of the events A, B, C, D and E below, estimate its probability and place the letter at the most appropriate position on the probability scale below.

	Probability
A name is picked at random from a list of 50 girls and 50 boys. $A = A$ girl's name is picked.	
A fair coin is tossed twice.	
$\mathbf{B} = \mathbf{A}$ head is the outcome on each toss.	
One card is drawn at random from a pack of playing cards.	
C = The card is a diamond.	
A day is chosen at random from a list of the days of the week.	
\mathbf{D} = The name of the day contains the letter \mathbf{a} .	
One number is picked at random from the set {1, 2, 3, 4, 5, 7, 11, 13}.	
\mathbf{E} = The number chosen is a prime number.	

(b) Write down another event that you think has a probability similar to that of C in the scale above.

(c) Write down another event that you think has a probability similar to that of **D** in the scale above.

(d) In a multiple choice quiz, three possible answers are given to a question. James does not know the answer and guesses which one is correct. Put an X on the scale above to show the probability that he has chosen the correct answer.

During a trigonometry lesson a group of students made some predictions about what they expected to find for the values of the trigonometric functions of some angles. They then found the Sin, Cos and Tan of 25° and 50° .

(a) In the table given, show, correct to three decimal places, the values they found.

Sin 25°=	Cos 25°=	Tan 25°=
Sin 50°=	Cos 50°=	Tan 50°=

(b) (i) Maria had said "The value from any of these trigonometric functions will always be less than 1". Was Maria correct? Give a reason for your answer.

Answer:															
Reason:															
reducti.															

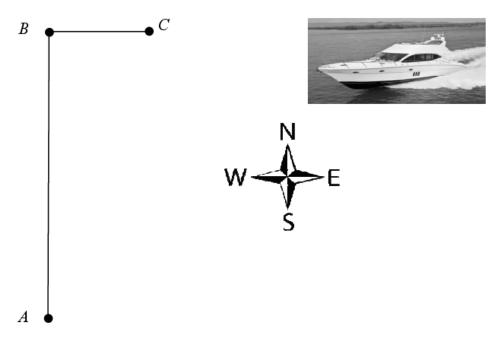

(ii) Sharon had said "If the size of the angle is doubled then the value from any of these trigonometric functions will also double." Was Sharon correct? Give a reason for your answer.

Answer:															
Reason:															

(iii) James had said "The value from all of these trigonometric functions will increase if the size of the angle is increased." Was James correct? Give a reason for your answer.

Answer:															
Reason:															
rcason.															

A boat travels due north from A for 30 minutes at 20 km/h. It reaches B and then travels due east for 24 minutes at 10 km/h. It is then at C.

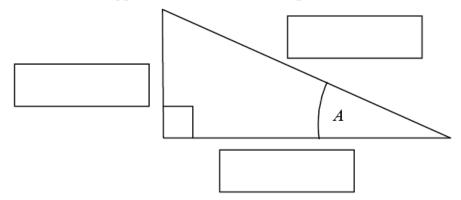

(a) How many kilometers has the boat travelled?

- (b) On the diagram, draw a line segment that shows the shortest distance from C back to A.
- (c) Use Pythagoras' theorem to calculate the shortest distance from C to A. Give your answer correct to the nearest metre.

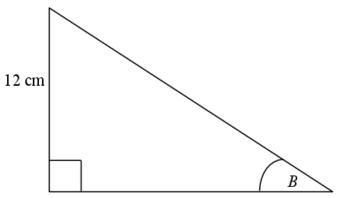

(a) The diagram below shows the angle A in a right-angled triangle. Indicate which side is adjacent and which is opposite in relation to the angle A, and which side is the hypoteneuse.

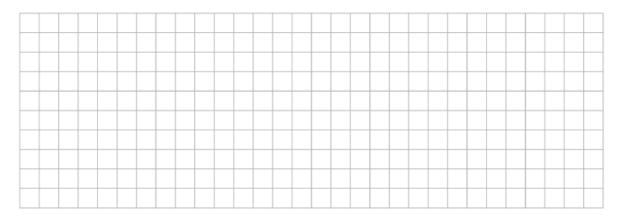

(b) Fill in the appropriate ratios in the table below.

Trigonometric Ratio	Ratio
	opposite hypotenuse
$\cos A$	
	oppo site adjacent

(c) In the right angled triangle below $B = 35^{\circ}$ and the opposite side is 12 cm. Find the length of the hypotenuse correct to the nearest centimetre.

A hurling match is played between Team A and Team B. A player on Team A, Fiachra, has the ball and attempts to score. The probability of Fiachra scoring a point is 0.6 and the probability of him scoring a goal is 0.1.

(a) Use your calculator to find the following trigonometric ratios. Write each answer correct to four decimal places.

$$\sin 25^\circ =$$

$$\cos 39^\circ =$$

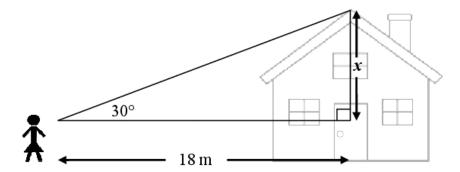

$$\tan 40^\circ =$$

(b) The angle P is shown in the triangle below.

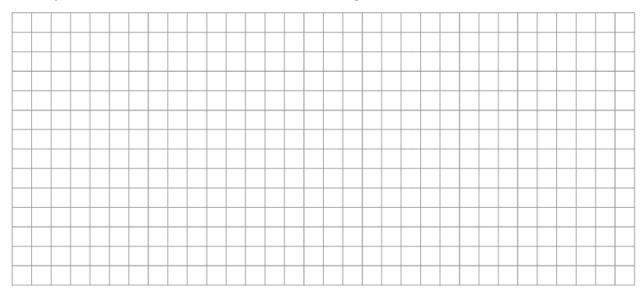

- (i) On the diagram, clearly label the side opposite the angle P.
- (ii) On the diagram, clearly label the side adjacent to the angle P.
- (iii) If the length of the opposite side is 9 and the length of the adjacent side is 12, find the length of the hypotenuse.

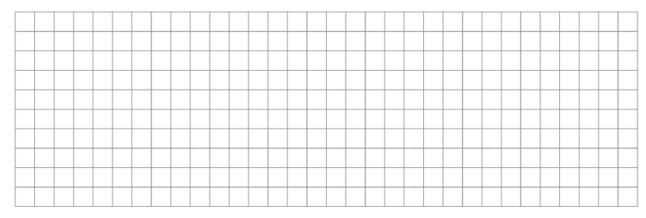

Jasmine wants to find the height of her house. She measures the angle of elevation of the top of the roof using a clinometer. The angle is 30°. She is standing 18 m from the point on the ground directly below the apex of the roof. Jasmine draws the diagram above to show this information.

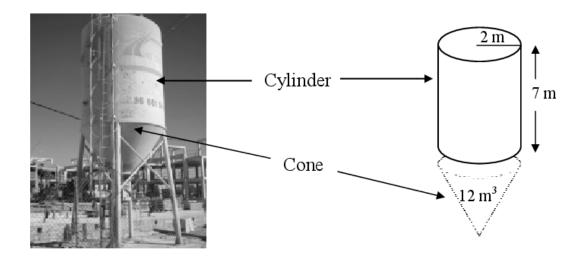

(a) Use Jasmine's measurements to find x.
Write your answer in metres correct to one decimal place.

(b) What other information is needed to find the height of the house?

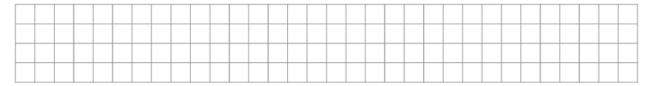

Cement is stored in a silo in the shape of a cylinder on a cone as shown in the diagram.

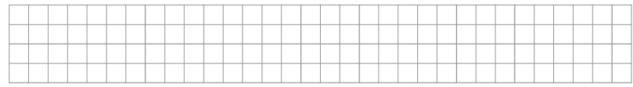

(a) The height of the cylinder is 7 m and the radius is 2 m. Find the volume of the cylinder. Use $\pi = 3.142$. Give your answer correct to the nearest m³.

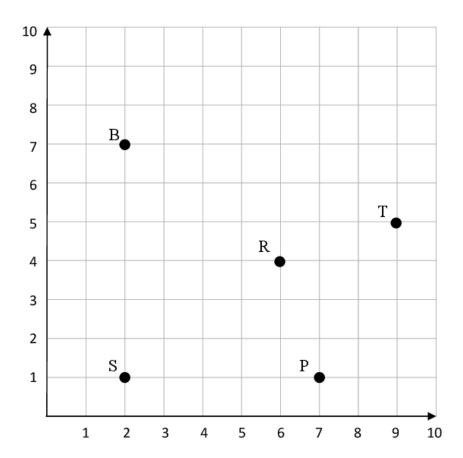

(b) The volume of the cone is 12 m³. Find the total volume of cement in the silo when it is full. Give your answer correct to the nearest m³.

(c) If 1 m³ of cement weighs 2.5 tonnes, what is the total weight of the cement in the silo?

An archaeologist has discovered various items at a site. The site is laid out in a grid and the position of each item is shown on the grid. The items found are a brooch (B), a plate (P), a ring (R), a statue (S) and a tile (T).

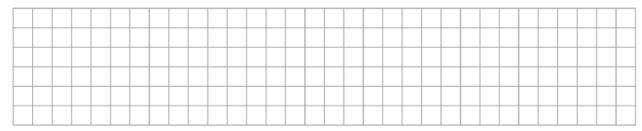

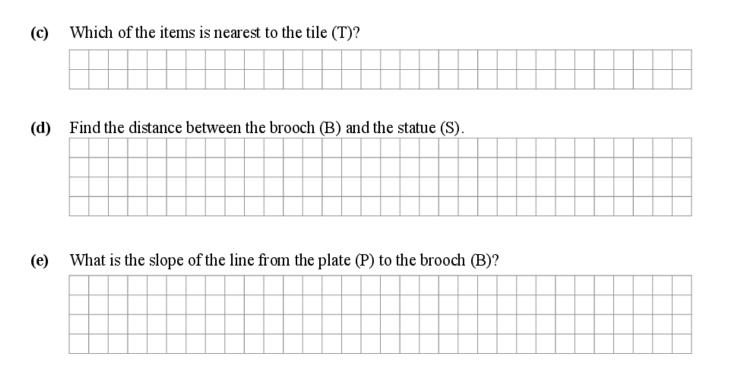

(a) Write down the co-ordinates of the position of each item.

$$B = (2, 7)$$

$$T = ($$
,)

(b) Each square of the grid represents 1 m². Find the total area of the grid.

Barra is comparing the cost of electricity supplied by two companies. He used 510 units last month.

(a) Fill in the following tables:

GRIDPOWER	€
Standing charge	9.47
18.5 cent per unit	
Sub-total	
13·5% VAT	
Total	

ELECTROLINE	€
No standing charge	
First 50 units free	
Then 25 cent per	
unit	
Sub-total	
13·5% VAT	
Total	

(b) What is the difference between the bills of the two companies?

(c) Barra contacted the more expensive company. The company offered him a 10% discount off his total bill.

In your opinion, from which company should Barra get his electricity? Give a reason for your answer.

Answer			
Reason			

Pat is a waiter at a restaurant. He is paid €8.65 per hour. He can also get tips. Last week he worked for 22 hours. Pat's wages plus tips were €235.50 in total for the week.

How much did Pat make on tips last week?

Question 13

(ii) A dealer buys a car for €17 500. He sells the car for €23 800. Calculate his profit as a percentage of the cost price.

3(c)

	000 is invested at is the amoun			end of one y	ear?
(ii) €50	00 is withdraw	n from this a	mount at the	beginning of	f the second yea
	interest rate fo at is the amoun				

4(b) (i) Solve the equation 5x-10 = 3(x+2).

Ø			

(ii) Multiply (x-3) by (2x+1). Write your answer in its simplest form.

Ø			

Question 16

2(b) (i) On a day when $\le 1 = £0.68$, find the value in euro of £816.

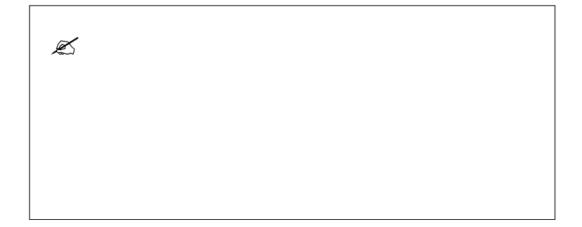

4(c)	Shan	e is x years old. Eileen is three years younger than Shane.
	(i)	Find Eileen's age in terms of x .
	(ii)	If the sum of Shane's age and Eileen's age is 47, write down an equation in x to represent this information.
	(iii)	Solve the equation that you formed in part (ii) above, for x .
	Æ	<u> </u>
	(iv)	When Eileen is $2x + 5$ years old, find the sum of Shane's age and Eileen's age
	Æ	≤

2(1.)	(*)	0 1 1	01 01 01	C' 1.1	1 .	C 0 C C 5 5
2(b)	(1)	On a day when	$\mathfrak{E}1 = \$1.21$,	find the	value in eur	0 01 \$6655

3(b) (i) Vat at 21% is added to a bill of €750. Calculate the total bill.

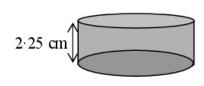

2(c) A solid metal sphere has a radius 3 cm.

(i) Taking π as 3·142 find, in cm³, the volume of the solid metal sphere.

(ii) The solid metal sphere was melted down and a quarter of the metal was recast to form a cylinder of height 2.25 cm. Taking π as 3.142 calculate, in cm, the radius of this cylinder.

Ø		

2(c)

(i) A rectangular carton full of orange juice measures 10 cm by 7 cm by 25 cm.

Find, in cm³, the volume of orange juice in the carton.

25 cm

(ii) The orange juice fills 14 cylindrical glasses exactly. Find, in cm³, the volume of each glass.

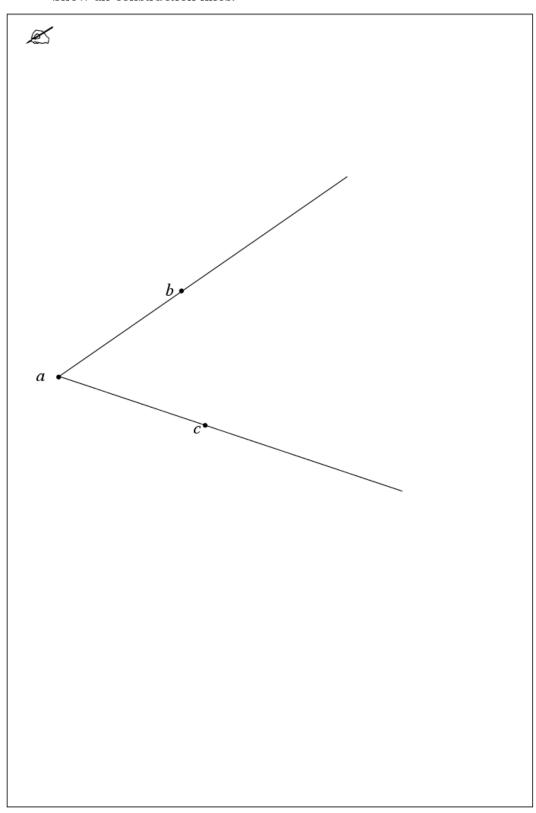

(iii) The radius of each glass is 2.4 cm. Taking π as 3.14, calculate the height of each glass, correct to the nearest cm.

2(c)	A solid trophy, as shown, has a sphere mounted on top of a cylinder. The radius of the sphere is 3 cm.				
		$h \operatorname{cm}$			
		8 cm -			
	(i)	Find the volume of the sphere in terms of π .			
	(ii)	The cylinder in the trophy has a diameter of 8 cm and its volume is four times the volume of the sphere. Find h , the height of cylinder in the trophy.			
	Z				
	(iii)	Find the total height of the trophy.			
	Ø.				

(iii) Bisect the given angle $\angle bac$ without using a protractor. Show all construction lines.

(c) (i) $\in 12000$ is invested at 2% per annum.

What is the amount of the investment at the end of the first year?

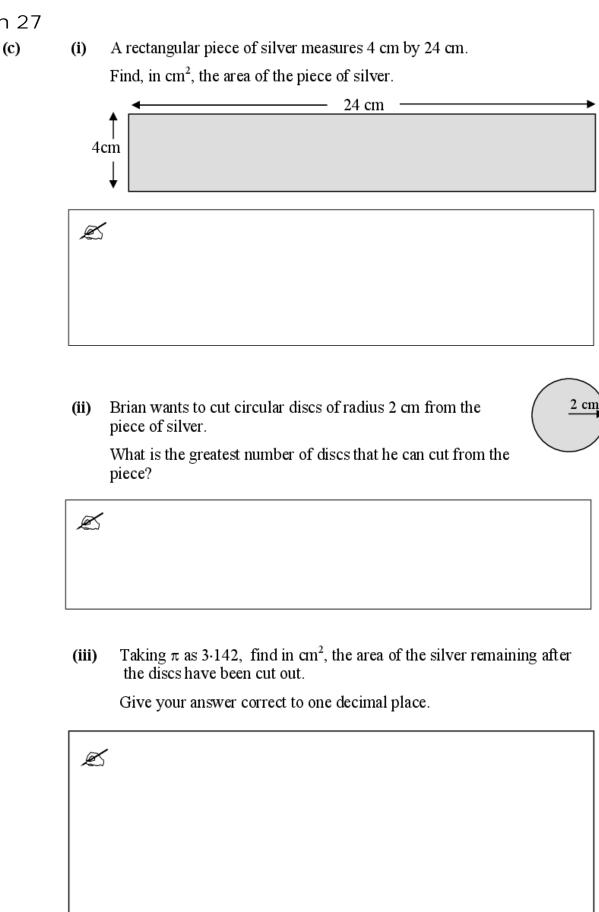

Question 25

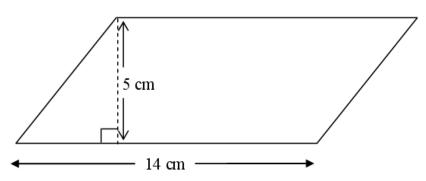

5. (a) Solve the equation 3(x-2) = 2x + 5.

1 20					
(b)	(i)	Dara left Lucan by car at 09:25 and arrived in Sligo at 11:55.			
		How long did it take Dara to travel from Lucan to Sligo? Give your answer in hours and minutes.			
	(ii)	The distance from Lucan to Sligo is 195 km.			
		Calculate Dara's average speed, in km/h.			
	بر				
	(iii)	On the return journey from Sligo to Lucan, Dara's average speed was 60 km/h.			
		How long, in hours and minutes, did the return journey take?			
	A				

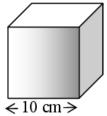

2. (a) A parallelogram has dimensions as shown in the diagram.

Find, in cm², the area of the parallelogram.

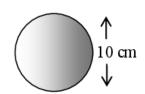

(b) (i) A cube with side length 10 cm is shown. Find, in cm³, the volume of the cube.

(ii) A sphere with diameter 10 cm is shown.
 Taking π as 3·142 find, in cm³, the volume of the sphere.
 Give your answer to the nearest whole number.

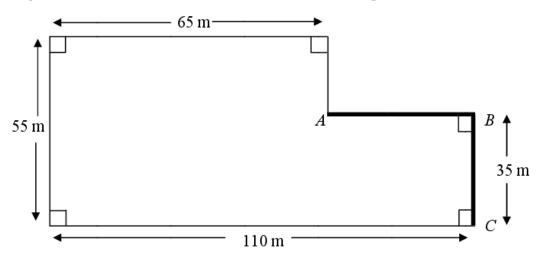

(iii) Express the volume of the sphere in (ii), as a percentage of the volume of the cube in (i).

(c) A park is in the shape of a rectangle with a semicircular end. 28 m The rectangle is 150 m long and 28 m wide. The diameter of the semicircular end is also 28 m. There is a path around the park which is used `Path for walking and jogging. Taking π as 3.142, calculate the length of the semicircular end. (i) Give your answer to the nearest metre. Z Calculate the total length of the path around the park. (ii) (iii) Barbara wishes to jog 2.5 km. How many laps of the path must she complete to ensure that she jogs this distance? Z

- 150 m -

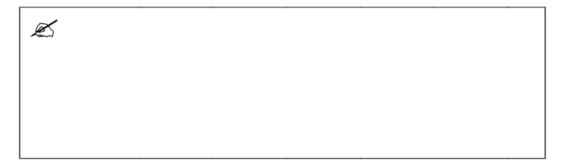

(c) The shape and measurements of a field are shown in the diagram below.

(i) Find the length |AB|.

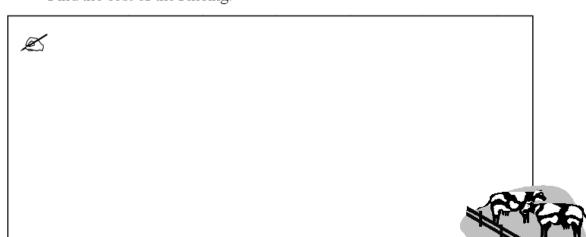

(ii) Find the length of the perimeter of the field.

(iii) The sections [AB] and [BC] are stone walls.
 A farmer wishes to put fencing around the rest of the field.
 The fencing costs €62·50 per 5 metres.

Find the cost of the fencing.
